

FEG Cash

Introduction

Climate change poses a major risk to the global economy. Over time, global climate change and more deforestation will likely lead to increased temperatures and changing rain patterns in the Amazon, which will undoubtedly affect the region's forests, water availability, biodiversity, agriculture, and human health.

Amazon will increase by 2–3°C. At the same time, a decrease in rainfall during dry months will lead to widespread drying. There are serious consequences to these changes. Projected increases of temperatures and decreased rainfall during already dry months could result in longer and perhaps more severe droughts, along with substantial changes in seasonality. Other causes of forest loss in the Amazon. Mining operations, for sought-after minerals such as gold, account for further damage to the Amazon Forest. Therefore, we decided to use this as our main utility and bring FEG Cash into the DeFi world.

Our Goal

The purpose of FEG Cash is to be able to help the environment and by doing so we can further help gorilla's and every animal in the wild trying to survive the rising heat and deforestation as the Amazon regions emit more carbon than they absorb. Our aim is to combat climate change by planting more trees in the Amazon and to give back the best habitat for all wild animals.

By creating FEG Cash we plan to raise funds not only through marketing but we also plan to gain charity partnerships so we can have a direct link to helping. We would also like to get the

community involved and will set up a charity linked donation wallet which goes directly to them.

Summary

Launched on the 18th of July 2021, the cash version of FEG has officially been rocketed into the Defi world! FEGCash is a community based DeFi project with an aim to bring instant rewards to holders with deflationary tokenomics and static reflections.

What is FEG Cash?

FEG CASH is the cash version of the FEG token. It is a hyper-deflationary DeFi with a maximum circulating supply of 1 quadrillion on the Binance Smart Chain that involves an inaccessible burn wallet. The idea behind FEG CASH is to provide a decentralized trading network operating on the Binance blockchain (BEP-20).

FEG Cash was launched with an initial 1Q (quadrillion) tokens. Half was immediately burnt to give FEG Cash the head start so we can control the Token's deflationary tokenomics. 8% of every transaction (buy, sell, or transfer) is taxed and distributed between all holders. Over half of this tax 5% is sent to an inaccessible burn address ("black hole") 1% to marketing and the rest is distributed to holders, incentivizing holders to hold and decreasing the circulating supply over time. These reflections are earned immediately and automatically added into holder's wallets.

Marketing Wallet

The initial marketing and charity wallet is 3%. This helps to promote the future project respective development of FEG CASH applications. An added 1% transaction tax will be sent from every sale to ensure we can suffice to an extreme marketing plan so our holders will continuously see the road map completed in full force and on time.

REWARDS

FEG CASH rewards its holders with a 2% transaction tax from every made, gaining reflections each day. The more you hold enables you to earn more, therefore increasing the amount you originally bought.

LIQUIDITY

FEG CASH collects 5% of each transaction and the contract adds it to liquidity to make the token more stable, giving more protection to its holders.

FURTHER DEVELOPMENT

1. FEG CASH wants to advance further into the cryptocurrency and DeFi spaces by releasing innovative products along with which the sustainability of the token will be ensured.
2. Partner with charities directly linked to the Amazon
3. Create donation wallet to help charities involved.

RoadMap

Creation

To create and design a structural website which centres around the utility of FEGCash.

Use a marketing campaign which enables us to further our future with helping the Amazon rainforest.

In the first phase we will apply for CoinGecko and CoinMarketCap and by doing so we aim to have over 20,000 holders.

Expanding

After the creation and success of the first phase our next goal will be to complete a Certik Audit to enable us to get further into the roadmap and by having a successful following before we get listed on major exchanges. We will complete a BTOK ad campaign and involve influencer partnerships which will help us gain more than 50,000 holders.

Development

In our final phase we aim to be listed on a major CEX, NFT Marketplace and enter the world of merchandising where our brand will help to donate to the charities we choose to partner with. The success of all phases is important for us and we will take each step with ambition and drive to get to our end goal.
